Table of Contents

Introduction	4
Xpediter/TSO Profiles	5
Xpediter/CICS Profiles	16
Summary	21

What Are Profiles?

- Profiles are a way to save Xpediter settings, PF Key settings and library names (load, DDIO, etc.) and other information (program name, parm info, XD 1.6 screen entries) to be re-used and/or shared
- Everyone gets a base profile in each product that contains site wide defaults as setup by your systems programmer
- Xpediter/TSO and Xpediter/CICS have separate profile facilities

Xpediter/TSO Profiles

- There are several ways to invoke the profile facility
 - Profile field on the Main Menu
 - 0.4
 - PROFILE command on the command line
- Xpediter profiles are stored in your ISPF profile dataset
- You can have up to 99 Xpediter profiles
- Xpediter profiles can be copied from one user to another

Everyone has a profile called DEFAULT the first time they use Xpediter/TSO. This profile will contain the site wide defaults as setup by your systems programmer who installed and customized Xpediter/TSO/IMS.

7 Product Spotlight: Everything you want to know about Xpediter profiles

Here we can see a list of all available profiles. The * in front of the DEFAULT profile indicates this is the profile currently in use. The available line and primary command are listed at the top of the screen.

(S) Select – Make this profile the current active profile

(D) Delete – Delete a profile from your list

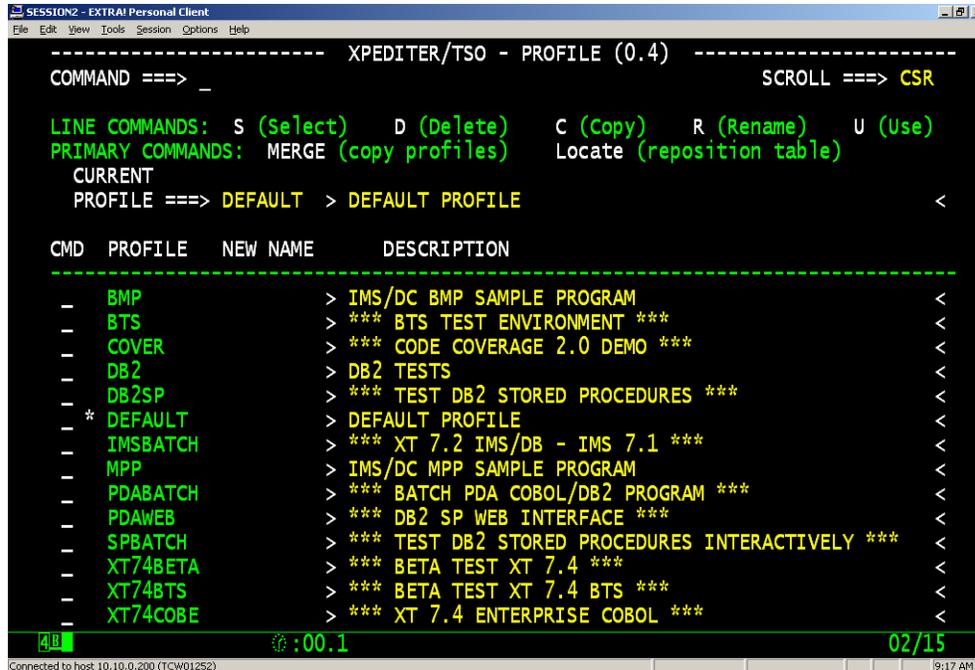

(C) Copy – Copy the information contained in one profile to a new profile

(R) Rename – Change the name of a profile

(U) Use – Make this profile the active profile and transfer me to the TSO test screen

MERGE – Copy an Xpediter profile from another programmers ISPF profile dataset, provided security rules allow you to do so.

LOCATE – Find a profile by name in your list

```

The environment you select on the SE.0 Environments menu is saved to your profile. By creating profiles for each environment you need for your shop, you avoid having to constantly switch between environments using 1 profile. On the top line in the middle of the screen is an indicator as to which environment is currently in use. The MPP (2.8) tells us we are using option 2 (TSO) from the main menu and option 8 (MPP) from the environments menu.

Xpediter/CICS Profiles

- New Profile Dataset
 - Starting with Xpediter/CICS there is a new profile dataset created by the systems programmer
 - Old profile datasets can be converted to the new format
 - Users can now copy, rename, delete and retrieve different profiles from the Load Profile (0.4) screen
 - The new profile allows users to save and restore trap settings for the 1.6 screen

=0.4 will transfer you to the Load Profile screen in Xpediter/CICS

```

SESSION2 - EXTRA Personal Client
File Edit View Tools Session Options Help
----- XPEDITER/CICS 08.01.00 - PRIMARY MENU -----C013
COMMAND ==> =0.4
PROGRAM:          MODULE:

0  SESSION PROFILE      - Set default session attributes
1  SESSION CONTROL      - Analyze summary of session events
2  DEBUGGING FACILITIES - Interactively debug application programs
5  FILE UTILITY         - Access datasets, temp stg, trans data, DLI, DB2
7  ABEND-AID FOR CICS   - Interface to Abend-AID for CICS

C  CODE COVERAGE       - Interface to Xpediter/Code Coverage
G  XCHANGE/CICS        - Interface to Xpediter/Xchange CICS Facilities
X  EXIT                - Exit Xpediter

To set breakpoints in your program or keep specific data fields,
enter your program name and use either the SOURCE command or PF key.

17 Product Spotlight: Everything you want to know about Xpediter profiles

This screen lists all profiles in the Xpediter/CICS profile dataset that match the PROFILE MASK entered onto the screen. From this screen, you may enter various line commands depending on if your profile dataset is in the "old" format (keylength = 8) or the "new" format (keylength = 21).

In the "old" format, the OWNER column is not displayed. In the "new" format, the OWNER column is displayed after NAME and before NEWNAME.

In the "old" format, you may select or copy any profile record. System programmers (XPSP users) may also rename and delete profile records.

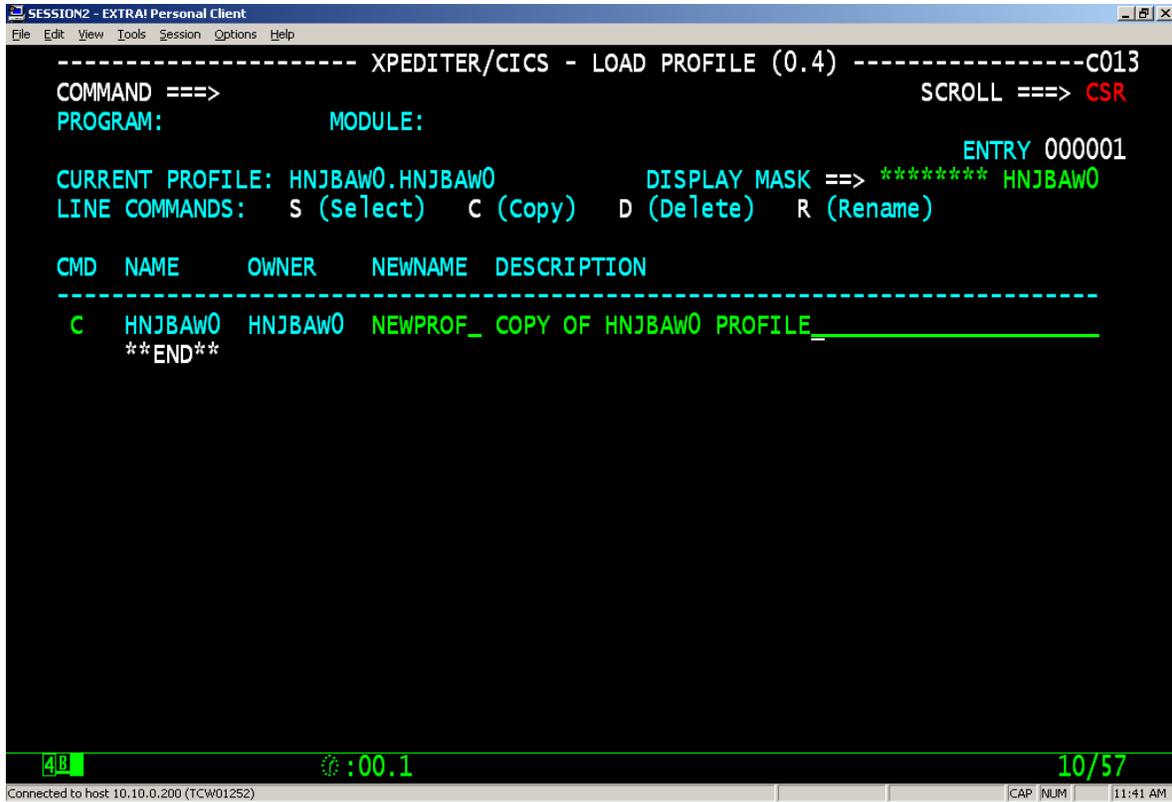

In the "new" format, you may delete records that you own (have your CICS userID in the OWNER column). You may also select, rename, or copy any profile record of any user. Rename deletes the old record only when you are it's owner. System programmers (XPSP users) may select, copy, rename, or delete any profile record of any user.

18 Product Spotlight: Everything you want to know about Xpediter profiles

I can copy all of the information in an existing profile to a new profile.

The screenshot shows a terminal window titled "SESSION2 - EXTRA! Personal Client" with a menu bar (File, Edit, View, Tools, Session, Options, Help). The main display area has a black background with green and red text. At the top, it says "----- XPEDITER/CICS - LOAD PROFILE (0.4) -----C013". Below that, it shows "COMMAND ==>" and "SCROLL ==> CSR". The prompt "PROGRAM: MODULE:" is followed by "ENTRY 000001". The current profile is "HNJBAW0.HNJBAW0" with a display mask of "***** HNJBAW0". Line commands are listed as "S (Select) C (Copy) D (Delete) R (Rename)". A table with columns "CMD", "NAME", "OWNER", "NEWNAME", and "DESCRIPTION" is shown. A single row is displayed: "C HNJBAW0 HNJBAW0 NEWPROF_ COPY OF HNJBAW0 PROFILE_". The command ends with "**END**". At the bottom, there is a status bar with "4B", a timer ":00.1", and "10/57". The footer shows "Connected to host 10.10.0.200 (TCW01252)" and "CAP NUM | 11:41 AM".

```
----- XPEDITER/CICS - LOAD PROFILE (0.4) -----C013
COMMAND ==>                                     SCROLL ==> CSR
PROGRAM:           MODULE:

Summary

Profiles are an excellent way to quickly load product options and defaults for different environments or test cases to expedite the testing process. Profiles can be shared between users to help facilitate the ease of use of the Xpediter products.
